Visa Status: Working Holiday Visa (Approved & Granted - Valid until October 2027)

Summary

Software Engineer with a Master's degree in Digital Services Engineering and 4 years of professional experience (work-study) building internal web applications for Renault Group. Strong object-oriented foundation (Java, C#, PHP) with a solid track record in end-to-end delivery, from database architecture and REST APIs to deployment. Arriving in Auckland in early October 2026 on an approved Working Holiday Visa with full open work rights, seeking fixed-term or contract roles. Highly motivated to quickly integrate into a new team and contribute both technically and as a collaborative team member.

Career history

Full-Stack Application Developer (Work-Study) at Renault Group, Cléon, France

September 2022 - September 2026

Grew over four years within Renault Group, designing and delivering internal full-stack applications used daily by employees.

Key responsibilities

- Designed, developed and maintained internal full-stack applications used across several departments.
- Analysed business requirements and managed projects end to end, from database architecture to deployment.
- Optimised critical existing applications and provided user support, training and technical documentation.

Achievements

- Designed and delivered an Industrial Traceability System (PHP, JavaScript, MySQL, Delphi, C#) for automated photographic traceability at the end of the production line, now processing ~25 vehicles/day (up from ~15), and providing reliable visual proof of each vehicle's condition before delivery. Modelled the complex relational database, built the web administration app, provided on-site client support.
- Built an Employee Hours Management application (PHP, MySQL, JavaScript) deployed and used by 5 teams (~80 people), giving project managers full visibility on project profitability through Excel-exportable dashboards.
- Contributed to the business-critical Service Request application (~100 daily users), which centralises service requests sent from across the factory to our department. Added new reporting interfaces and features, and carried out ongoing maintenance.

Industrial Project Monitoring Intern at Revoz, Novo Mesto, Slovenia

April 2025 - July 2025

International internship as part of my training. Supported industrial project monitoring on a production site.

Key responsibilities

- Carried out an inventory of production line equipment.
- Organised and facilitated project monitoring meetings.

Full-Stack Web Developer Intern at Renault Group, Cléon, France

January 2022 - February 2022

Developed an internal web application for business management.

Full-Stack Web Developer Intern at Renault Group, Cléon, France

June 2021 - July 2021

Developed an access portal for internal business applications.

Projects

History.job - Job Application Tracker | React, Node.js, Express, MongoDB, Chrome Extension, AI (Groq / Llama 3)

2026

A personal web app that centralises all my job applications in one place with an interactive timeline, centralised document storage and automatic scanning of offers via AI.

Highlights

- Built a full-stack web app using the modern JavaScript ecosystem (React, Node.js/Express, MongoDB) deployed on Netlify, Render and Cloudinary.
- Developed a Chrome extension that uses a Llama 3 model (Groq API) to read job-offer pages and save them to the database automatically, saving a lot of manual data entry.
- Implemented application tracking by status with an interactive history timeline and centralised storage of CVs, cover letters, contacts and notes.
- Source code: github.com/alexFahl/history.job

FStats - Football Stats Tracker | C#, .NET MAUI, SQLite

2025

Cross-platform app to save football matches and personal performance statistics.

Highlights

- Built a cross-platform .NET MAUI app (Android, iOS, Windows, macOS) from a single C#/XAML codebase.
- Designed a SQLite persistence layer using the repository pattern.

- Implemented a statistics dashboard computing win rate and goals/assists per match.
 - Source code: github.com/alexFahl/FStats
-

Education

Engineering Degree (Master's level), Digital Services Engineering (ISN) from ESIGELEC, Saint-Etienne-du-Rouvray

Graduated 2026

Final-year project with Alpine (team of 6): led the software architecture of a real-time acoustic-AI wiring quality-control system. Designed the relational database and built the full-stack web app, interfaced with the AI module via WebSocket.

Bachelor's in Computer Science (Application Development) from Campus la Chataigneraie, Le Mesnil-Esnard

Graduated 2023

Higher National Diploma in IT - BTS (Application Development) from Campus la Chataigneraie, Le Mesnil-Esnard

Graduated 2022

Key skills

- **Back-end:** Java (Spring Boot, Java EE), C#, PHP, Python, C, REST APIs, Node.js, Express.js, WebSocket
 - **Front-end and Mobile:** JavaScript, React, HTML/CSS, Tailwind CSS, Bootstrap, jQuery, Android
 - **Databases:** database architecture, SQL, NoSQL, MySQL, Oracle, MongoDB, SQLite, Firebase, PL/SQL
 - **DevOps and Tools:** Git, Agile, Docker, Kubernetes, Linux, Maven, JUnit, Swagger, UML, MVC, Design Patterns, V-Model, Generative AI tools
 - **Soft skills:** Teamwork, Communication, Adaptability, Autonomy, Quick learner
 - **Languages:** English (Advanced - TOEIC: 860), French (Native)
